

EGR + Solenoid Valve Tester

 **BUY ONLINE**

 **01225 702104**

WHERE TO BUY...

Features...

- Interchangeable valve connection adaptor leads
- Large croc-clip battery power connections
- ABS plastic case with protective and ergonomic over-boot
- LED indicators for power, output status, frequency selection and overload
- Rotary control to vary output switching duty cycle
- Push-button to select frequency

- Switching duty cycle variable 5% - 95%
- High frequency switching (for progressive opening) approx. 400Hz
- Low frequency switching (for ON-OFF opening) approx. 1 per second (1Hz)
- Operating voltage 9-15v
- Switching current > 2A

Overview...

SP Diagnostics has designed, manufactured and released their new EGR and Solenoid Valve Tester. This new tool helps the technician test the integrity of EGR valves and other 12v solenoids, such as vacuum solenoids, boost pressure control valves and actuators, petrol injectors, carbon canisters and even relays. Due to the tool's variable frequency, EGR valves can either be cycled to ensure correct operation or to clean it during its cyclic mode. In high frequency mode, the valve can be opened progressively, allowing more efficient manual cleaning.

Although EGR valves can be activated in situ, SP Diagnostics believes that removal of the EGR before testing is essential to visually confirm full and correct operation, with the added benefit of full access for thorough cleaning.
